

The eRoader

3-in-1

The eRoader

The **eRoader** is a 3-in-1 sustainable electric vehicle with ***Scooter, Bicycle & Skateboard*** modes. It first starts as a plain eSkateboard, but all the parts are hidden within. There are special storages in which parts such as the expandable handlebars and the bicycle seat are stored, making it conveniently portable. Two of the wheels on the basic eSkateboard can be pushed inwards for Scooter/Bicycle modes, the others can be expanded to the required size. Charging sockets can be found on the handlebars and on the side of the basic eSkateboard, which are compatible with eCar chargers. It has Solar power charging option too. This is made from a lightweight and waterproof metal. It can be customized to fit your style and preferences at your wish. The eRoader is a more efficient and green way to go around. It makes travelling to places simpler, better and fun for anyone.
